About Tabor Electronics
Established in 1971, Tabor Electronics has become a world-leading provider of high-end signal sources, featuring RF, pulse, function and arbitrary waveform generators and transceivers; high-voltage amplifiers; and waveform and modulation creation software. Tabor has earned global recognition for its highly skilled workforce and innovative engineering capabilities. In addition to offering a full range of self-branded instruments, Tabor is also a world-class OEM that private-labels a variety of products for industry leaders. Technologically advanced, featuring the highest levels of performance, reliability, and, most importantly, price-competitiveness, Tabor products are currently used in a wide range of applications from quantum physics experiment control to military and aerospace asset testing.

Over the past decade Tabor has extended its global reach. Headquartered in Nesher, Israel, Tabor maintains a worldwide distribution network and has become the partner of choice for over 50 major distributors and integrators around the globe.

Customer Service and Support
- Professional assistance for choosing the perfect solution.
- Individualized technical support help desk.
- Repair and calibration services in Israel and the USA.

Warranty
The instruments come standard with a three- or five-year warranty. Each instrument has full test results, a calibration certificate, an online product and programming manual, software drivers, and programming examples. Our obligation under this warranty is to repair or replace any instrument or part thereof that, within the warranty period after shipment, proves defective upon examination. To exercise this warranty, write or call your local Tabor representative or contact Tabor Headquarters and you will be given prompt assistance and shipping instructions.

Corporate Headquarters

# RF Signal Generators

## LUCID Series

Tabor's Lucid Series of RF analog signal generators offers industry-leading performance in multiple form factors. The series features 3, 6, and 12 GHz models in desktop, portable, benchtop, or rackmount configurations. All units have extremely fast switching speed, superior signal fidelity, and analog modulation including AM, FM, PM, and Pulse Modulation. It has an intuitive graphical user interface, remote SCPI control, and backwards command compatibility with most signal generators.

## DESKTOP PLATFORM

The Desktop Platform offers all the functionality of a fullFeatured benchtop analog RF signal generator but in an industry-leading small package. It is designed to be used on the bench, as an embedded source, or as part of a larger automated test system (especially when rack space is at a premium). A GUI and an API are provided for easy control from your PC through Micro-USB or SPI.

## PORTABLE PLATFORM

A rugged field-portable signal generator, the Portable Platform is equipped with an 10° touch screen that is suitable for day and night use. In addition, it has more than 2-hours of operational battery life with built-in USB, an optional LAN interface, and a removable micro-SD card. You'll get the performance you need without worrying about an AC supply.

**BENCHTOP PLATFORM**

Creating multiple analog RF signals on the bench is easy. The Benchtop Platform is housed in a 19 3/4" 2U enclosure with a 5" touchscreen and front panel controls enabling stand-alone operation. The unit can be configured with 1, 2 or 4-phase coherent RF channels and has built-in LAN, a USB interface with SCPI control, and a removable micro-SD card. With phase-coherent, multi-channel capability it can solve a host of measurement applications in quantum physics, amplifier characterization, and phased array antenna systems.

**RACK MOUNT PLATFORM**

The Rack Mount Platform With all the features of the Benchtop Platform, the Rack Mount offers the industry’s highest channel density in the least possible space, with up to 4 phase-coherent channels in a 19” 1U unit and up to 16 phase-coherent channels in a 19” 3U unit. Connectivity for remote control is enabled with LAN and USB interfaces and SCPI control.

### µW Signal Generators

**LUCID-X Series**
The new Lucid-X Series extends the frequency range of Tabor's industry-leading Lucid Series of analog signal generators. The series features 8, 20, and 40GHz frequency ranges and offers all the advanced capability of the Lucid series but extended to mmWave. Built on Tabor's modular-technology platform, the LSX family is available in PXIe, Desktop, Rack, Benchtop and Portable formfactors. Specs are not final.

**DESKTOP PLATFORM**
The Desktop Platform offers all the functionality of a fully featured, full-size, µW analog signal generator in the smallest footprint module available. Its small size enables it to be used as single signal generator on the bench or easily scaled to hundreds of channels, in larger systems, while keeping the required space to a minimum.

**RACK MOUNT PLATFORM**

With all the features of the Benchtop Platform, the Rack Mount offers the industry’s highest mmWave channel density in the least possible space, with up to 4 phase-coherent channels in a 19\" 1U unit and up to 16 phase-coherent channels in a 19\" 3U unit. Connectivity for remote control is enabled with LAN and USB interfaces and SCPI control.

**PXie Platform**

The Modular Platform offers all the functionality of a fully featured rack or bench μW analog signal generator in a two-slot PXie module. Its small size and modularity enable it to be scaled from a single channel up to hundreds of channels, providing μW and mm waves.

**Arbitrary Waveform Generators / Transceivers**

**Proteus Series**

Proteus provides both state-of-the-art arbitrary waveform generation with optional digitizer capability. The system integrates the ability to transmit, receive, and perform user-programmable FPGA-based digital signal processing and decision making all in a single instrument. Proteus provides the key capability for closed-loop transceiver software defined radio applications in aerospace, defense, telecommunications, automotive, and physics applications.

**Desktop Platform**

The Desktop Platform provides up to 12 channels of capability, but without a touch screen, saving both space and cost. This compact platform has both an internal computer and remote control via an external PC. Connectivity to the instrument is provided by 3 x USB HOST and 1 x 10Gbit LAN as standard. Thunderbolt 3, GPIB, or 2 x 10Gbit Optical are available as options.

### PXIe Platform

The Proteus module takes full advantage of the PXI Express Platform. Its core transmit, receive, and FPGA processing functions are enhanced with the addition of high-speed data transfer and incredible phase coherent channel density (up to 32 channels per 19" 3U chassis).

### Benchtop Platform

The Benchtop has all the capability of the Desktop but has a 9" touch screen, keypad and an on-board PC, creating a fully standalone system. With a maximum channel count of 12 AWGs, it is a compact, self-contained unit, providing waveform creation, sequencing and analysis on the bench.

### RF Arbitrary Waveform Generators / Transceivers

#### PXie Platform
Utilizing state of the art RF DAC and ADC technology, phase coherent channel density (up to 32 channels per 19" 3U 19" chassis) and high-speed data transfer, the Proteus RF PXie Series can be used to create complex RF environments in real-time.

**PXie Chassis with Embedded Controllers**

The PXie Chassis allows you to purchase any Proteus PXie module or amplifier and later add more channels or upgrade to higher sample rates. The system includes an embedded PC with an internal SSD drive, HDMI connection, and USB interfaces for a mouse and keyboard, as well as control using USB-C and 1000BASE-T LAN.

Applications

Quantum Physics - Proteus plays a part in many quantum physics experiments. Its unique AWT architecture allows for the generation and analysis of pulses in real time, with fast measurement response and feedback provided with its FPGA-based decision-block architecture. Applications include NMR/EPR, device characterization, computing, communications, and sensing. With direct to RF/uW capability, it eliminates the need for complicated up/down converting units and requires no IQ alignments. It can be scaled to thousands of coherent channels, and its advanced signal processing engine has the capability of analyzing up to 10 frequency multiplexed readout lines.

Radar and Electronic Warfare - The Proteus is an ideal tool for real-time waveform generation and analysis up to and including X-band. The transceiver allows for real-time closed loop analysis for fast feedback systems such as radar target generation and adaptive electronic warfare systems. The scalable, multi-channel, coherent, deterministic waveform playout capability allows for the generation of multiple active emitters, while its 2GHz of bandwidth allows for the easy creation of background electromagnetic emissions.

Next Generation Wireless Communications Systems – When designing, developing, and manufacturing new wireless systems – based on technologies such as multiple-input and multiple-output (MIMO) antenna matrices and orthogonal frequency-division multiplexing (OFDM) – we built the Proteus on a scalable, wide bandwidth (2GHz) architecture, with high-performance RF DAC/ADC (EVM better than -50dBc) that is compatible with MATLAB. This allows you to create, model, then transfer waveforms or sequences of waveforms to the Proteus for real world testing.

Generate any Imaginable Scenario - Proteus has an innovative hardware-based, task-oriented programming system for complex waveform sequences. You can generate and download waveforms simultaneously and stream data directly to the FPGA (bypassing the memory) at speeds of up to 4GS/s. A full and easy-to-program digital subsystem of up and down converters along with finite impulse response filters and FFT and multiple real-time averaging blocks make the Proteus AWT one of the most comprehensive measurement solutions available.
Modular RF Amplifiers

These amplifiers, combined with Tabor’s RF arbitrary waveform generators or Lucid Signal Generators can provide output power of up to 28dBm. With a very small footprint, these ultra-wideband (20GHz) amplifiers are designed for high-frequency, high-power signal amplifications. They are an ideal amplifier to compliment any signal source that needs an extended power boost for demanding applications.

PXI & PCI Signal Amplifiers

Tabor Electronics’ amplifiers produce high voltages by converting the supply rails to voltage suitable for signals up to 180Vp-p. They operate in conjunction with Tabor’s Waveform Generators thus providing the ultimate solution for PXI, PCI and bench, high-voltage, wideband applications.

Arbitrary Waveform Generators

Wonder Wave Series
This series combines two technologies. While being a true, memory-based AWG device, with all the memory management capabilities needed to create complex waveforms, it also implements a direct digital synthesizer (DDS), enabling many standard modulation types and frequency agility capabilities.

Pulse Arbitrary Generators

Pulse Master Series
Tabor Electronics' single or dual-channel pulse and waveform generators offer a complete array of pulse, standard, arbitrary, sequenced, and modulated waveforms with unmatched performance. Their smart, compact, 2U half-rack-width footprint allows you to save substantial benchtop or rack space, while benefiting from high performance, bandwidth, signal integrity, and reliability, with the flexibility to adapt to a full spectrum of applications.

**PXI & PCI Arbitrary Waveform / Function Generators**

**TE-AWG Series**

The 5000 Series offers excellent performance in the PXI, cPXI, and PCI class. It combines two technologies (DDS&ARB), making use of the best qualities from each of these technologies to create complex waveforms on one hand while generating all the standard functions and modulation formats on the other.
